

What Does Up to 40% Increase in Feed Efficiency Mean to You?

To Kirk and Radene Messenger, Cheyenne, WY, it means:

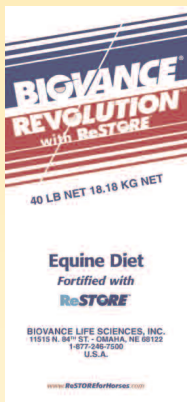

- "Hitch" ready horses, in a shorter time, on less feed.
- Significant savings in feed and management costs.
- Maximizing use of every pound of feed fed, hay included.
- "We simply can't afford to do it any other way!"

To Terry and Deb Pierce, Oakland, IA, it means:

- Weaning bigger, growthier foals without "milking down" our mares.
- "We feed less per horse than we ever have, but our horses stay in top condition."
- "We have cut our veterinary expenses in half!"

Catalyst-Rx™ and **Revolution™** are patented technologies that were originally developed to help prevent colic, laminitis and other problems associated with equine digestive abnormalities. Ten years worth of university research and field testing on thousands of horses, soon verified that these products also positively impacted feed efficiency by as much as 40%. No other product can substantiate similar claims!
