**“New ReStore-Rx™ with Senleptin™
is truly a major breakthrough in
equine nutrition.”**

ReStore-Rx™ is a dietary supplement used therapeutically and in preventive healthcare programs to restore, maintain, and improve the health and performance of the horse.

Not only is it unique, but so important and so effective that it has been granted protection by the United State Patent Office.

Note: A U.S. patent is obtained only after preparing a very detailed patent application, and then only after a patent examiner has determined that the patent application is allowable. It must fall into a class that is regulated by law, for example compositions and processes. The invention must be useful (not just a theory). It must be original; that is, no one did it before. And it must be “unobvious” to others in the same field. In other words, you cannot patent something that was already recognized (obvious) to other scientists.

Unlike other supplements, ReStore-Rx™ works in the hindgut to produce 27% more energy and 19% more microbial protein from the same feed ingredients.

The horse’s hindgut is both a feed processor and a food (nutrient) producer. Millions of natural microbes in the hindgut increase in number when supplied with the preferred sources of nutrients found in ReStore-Rx™.

At the same time, these microbes produce enzymes that ferment (process) feed ingredients. It is this miraculous fermentation process that converts feeds into the volatile fatty acids and amino acids needed for growth, energy and maintenance.

Does Your Horse Really Need a Dietary Supplement?

All horses fed a grain-based concentrate are at risk of dietary distress syndrome (DDS). It's often the cause of poor performance or a potentially life-threatening illness.

ReStore-Rx™ supplementation is "the right thing to do" for any of the following problems when related to dietary distress:

- Poor keepers, unable to restore and maintain body condition
- Chronic diarrhea, especially in older horses
- Frequent bouts of colic or sub-clinical colic
- Poor performance with no signs of clinical illness
- Enteroliths (stones)
- Excessive weight loss after foaling
- Foals that lack normal growth and development
- Horses compromised by physical trauma, stress, or post-operative recovery

GUARANTEE: There's no risk when you decide to try ReStore-Rx™. If not completely satisfied, request a refund within 60 days and you'll get 100% of your money back.

INDICATIONS FOR USE

Dietary Distress Syndrome (DDS)
ReStore-Rx™ has been shown to aid in the prevention of those conditions associated with Dietary Distress Syndrome (DDS).

Post-Operative Care Programs
ReStore-Rx™ has been used effectively under field clinical conditions as part of a post-operative program to restore normal digestive function in the horse.

DESCRIPTION: ReStore-Rx™ is a complex of peptides, amino acids, and soluble nitrogen, clinically proven to stimulate the growth and metabolic efficiency of the naturally occurring, essential bacteria that reside in the hindgut. ReStore-Rx™ also provides key micronutrients and metabolic intermediates that contribute to metabolic and physiologic stabilization in the compromised horse.
